

JACOB COOK

Sacramento, CA | (916) 314-5358 | jacobcookofficial@gmail.com
[LinkedIn: jcook-dev](#) | [GitHub: jacobdcook](#) | jacobdcook.com

CompTIA Security+ certified CS graduate pursuing SOC Analyst and IT Support roles. Hands-on experience with SIEM deployment, log analysis, phishing triage, and incident documentation through home labs and WGU coursework, simulating Tier 1 SOC workflows and incident response processes.

EDUCATION & CERTIFICATIONS

WGU: MS, Cybersecurity (In Progress) | CSUS: BS, Computer Science (2024) GPA 3.50
CompTIA Security+ Certified (SY0-701) — Score: 805/900 — Jan 2026

TECHNICAL SKILLS

SOC / Blue Team: SIEM (Wazuh, Splunk), Log Analysis, Alert Triage, Incident Documentation, Phishing Analysis, Threat Detection, Playbook Automation

Systems & IT: Windows Endpoints, Linux (Ubuntu/CentOS), Azure AD, Networking Fundamentals, Wireshark, VirtualBox, System Hardening, Root Cause Analysis

Development & Automation: Python, Bash, SQL, Git, FastAPI, React, Ticketing & Documentation

TECHNICAL PROJECTS

Blue Team SOC Monitoring Lab (Wazuh SIEM) 2026

- Deployed full Wazuh stack (Manager, Indexer, Dashboard) to monitor endpoints for brute-force attacks and malware indicators
- Wrote Python scripts to simulate attack scenarios, tuning detection rules and reducing false positive alerts across monitored endpoints
- Analyzed authentication and security logs to identify true positives, determine incident severity, and document escalation decisions

Phishing Analysis Lab 2026

- Performed hands-on phishing email analysis including header inspection, link extraction, and VirusTotal lookups for IOC identification
- Created Tier 1–style triage reports documenting IOCs and escalation recommendations aligned to incident response workflows

SOAR-lite – Incident Response Orchestrator 2026

- Built automated playbooks triggered by SIEM alerts to streamline SOC incident response workflows
- Integrated alert enrichment and notification pipelines to reduce manual triage steps for commonly recurring alert types

Industry-Sponsored AI Platform (G3-GPT) — Team of 6 2024

- Engineered role-based access control and Azure SSO to enforce strict data privacy requirements across corporate stakeholders
- Delivered production-ready enterprise platform collaborating across a six-person engineering team

PROFESSIONAL EXPERIENCE

Target Distribution Center 2019 – 2025

Warehouse Operations – Engineering & Facilities Support

- Monitored industrial control systems and sensor data to detect operational anomalies, ensuring system availability and rapid incident response
- Analyzed system failures, performed root cause analysis, and documented resolutions for compliance
- Implemented hardware configuration changes under formal change management procedures to reduce operational risk and maintain system integrity
- Coordinated cross-team incident response efforts, documenting incidents and resolutions to minimize downtime and support operational continuity

ADDITIONAL

-
- Ongoing hands-on labs simulating SOC analyst workflows including incident detection, alert triage, root cause analysis, escalation workflows, and security documentation
 - Enjoys camping, mountain biking, and hiking — portfolio and project details at jacobdcook.com
