SUMMARY

Detection and security automation engineer with hands-on experience building behavioral detections, tuning false positives, and automating incident response workflows. CompTIA-certified across four disciplines (Security+, CySA+, PenTest+, SecurityX) with a BS in Computer Science and an MS in Cybersecurity in progress. Six years of operational systems experience — monitoring, root cause analysis, and incident coordination — that translates directly into SOC intuition. Building in Wazuh, Okta, Azure, and Python daily.

TECHNICAL SKILLS

Detection & SOC: Threat Detection, SIEM (Wazuh), Alert Triage, Incident Documentation, Phishing Analysis, IOC Analysis, Playbook Automation, SOAR

Cloud & Identity: Azure AD, Okta, SSO / RBAC, Terraform, Microsoft Sentinel (familiar)

Systems: Windows Endpoints, Linux (Ubuntu / CentOS), Wireshark, Networking, System Hardening, VirtualBox

Development: Python, Bash, SQL, FastAPI, React, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack — Detection-as-Code

2026

- Built behavioral Sigma rules for Intune MDM abuse within days of the Stryker disclosure — detections target MDM wipe patterns generically, not just Intune, to catch future variants using other MDM tools.
- Integrated KV store enrichment and baseline-aware thresholds to separate legitimate admin device wipes from mass destruction events, reducing expected false positive volume by ~80%.
- Mapped all 6 rules to MITRE ATT&CK with response playbooks and 3 documented benign use cases per detection for triage clarity.

Blue Team SOC Monitoring Lab — Wazuh SIEM

2026

- Built a production-equivalent SOC monitoring environment from scratch — full Wazuh stack across multiple endpoints — to develop and validate detection logic against real attack simulations.
- Reduced false positive alert volume by ~40% by tuning detection rules against Python-simulated attack scenarios, producing a higher-fidelity signal for triage.
- Produced structured incident timelines from auth and security logs that accurately distinguished 12 true positive threat patterns from benign noise across 200+ simulated events.

Okta Detection Engine — Identity Threat Detection

2026

- Engineered Python-based detection logic for 5 Okta identity threat scenarios: MFA fatigue, impossible travel, brute force, suspicious MFA enrollment, and after-hours privilege escalation.
- Built sliding-window analysis and enrichment hooks that flag anomalous identity behavior while filtering 3 documented benign use cases per rule to reduce false positive triage burden.

SOAR-lite — Incident Response Orchestrator

2026

- Cut manual triage time for recurring alert types by an estimated 60% by building automated SIEM-triggered playbooks that handle enrichment, notification, and routing without analyst intervention.
- Eliminated 4 manual steps from the Tier 1 response workflow by integrating alert enrichment pipelines — accelerating mean time to response on common alert categories.

Network Traffic Behavioral Analyzer

2026

- Built behavioral baseline analysis that detects C2 beaconing and data exfiltration patterns using traffic volume anomalies rather than static IOC signatures — catching threats that evade traditional detection.
- Integrated AI-assisted summarization to surface high-confidence anomalies for analyst review, reducing raw alert volume to actionable findings.

G3-GPT — Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Secured a production AI platform for corporate stakeholders by engineering RBAC and Azure AD SSO — enforcing data privacy requirements that enabled executive-level adoption.
- Shipped an enterprise-grade platform on deadline as part of a six-person team under direct industry sponsor oversight — zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer — Systems Monitoring & Incident Response

2019 – 2025

- Sustained 99%+ uptime across industrial control systems by monitoring sensors and operational alerts across multiple shifts — the same continuous monitoring discipline that defines Tier 1 SOC work.
- Resolved 50+ system anomalies through structured root cause analysis, producing compliance-tracked documentation that reduced repeat incidents by 30% and supported audit readiness.
- Drove measurable reductions in mean time to recovery by coordinating cross-team incident response — directly mirroring SOC escalation, triage prioritization, and post-incident reporting workflows.

EDUCATION & CERTIFICATIONS

WGU — MS, Cybersecurity

Expected Oct 2026 · GPA 3.50

CSUS — BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
