

JACOB COOK

Detection Engineer | Security Automation | Wazuh · Azure · Okta · Python · SOAR

Sacramento, CA · (916) 314-5358 · jacobcookofficial@gmail.com
[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

Detection-focused security professional building SIEM environments, detection rules, and automated response workflows in home labs and coursework. CompTIA-certified across Security+, CySA+, PenTest+, and SecurityX with CSIE stackable credential; BS Computer Science and MS Cybersecurity in progress. Six years of operational experience monitoring systems, performing root cause analysis, and coordinating incident response in a 24/7 environment. Daily work in Wazuh, Okta, Azure, Terraform, and Python.

TECHNICAL SKILLS

Detection & SOC: Threat detection, SIEM (Wazuh), alert triage, incident documentation, phishing analysis, IOC handling, playbook automation, SOAR concepts, Sigma-style detection (lab)

Cloud & Identity: Azure AD, Okta, SSO/RBAC, Terraform, infrastructure-as-code review

Systems & Engineering: Windows and Linux, networking, Wireshark, VirtualBox, system hardening, Python, Bash, SQL, FastAPI, React, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack — Detection-as-Code 2026

- Authored Sigma-style rules and playbooks for Intune MDM abuse scenarios inspired by public reporting on large-scale device impact and data exposure, mapped to MITRE ATT&CK.
- Documented enrichment and triage paths so alerts carry analyst-ready context beyond raw telemetry.

Okta Detection Engine — Identity Threat Detection 2026

- Implemented Python detections over Okta System Log patterns including MFA fatigue, impossible travel, and privilege-relevant activity with enrichment for faster review.
- Structured outputs so findings read like production analyst notes (IOCs, confidence, recommended next steps).

SOAR-lite — Incident Response Orchestrator 2026

- Built automated playbooks triggered by SIEM-style alerts with enrichment and routing to cut manual steps on recurring alert types.
- Connected webhook-style ingestion to scripted response paths so repeat scenarios close the loop from alert to documented action.

Cloud Infrastructure Security Auditor 2026

- Automated checks across Terraform and live Azure resources to surface misconfigurations with remediation-oriented output.
- Combined static IaC review with live resource review to catch drift and priority issues in one workflow.

Network Traffic Behavioral Analyzer 2026

- Focused on behavioral signals (beaconing-style patterns, volume anomalies) with AI-assisted summaries to speed review.

Blue Team SOC Monitoring Lab — Wazuh SIEM 2026

- Deployed full Wazuh stack with Python-simulated attacks, tuned rules to reduce noisy alerts, and documented true-positive triage from auth and security logs.
- Produced incident-style timelines that separate benign noise from repeated attack patterns in lab traffic.

G3-GPT — Industry-Sponsored Enterprise AI Platform (Team of 6) 2024

- Engineered RBAC and Azure AD SSO for a production RAG platform, meeting sponsor privacy requirements across stakeholders.
- Shipped on a fixed academic timeline with a six-person team under sponsor oversight.

PROFESSIONAL EXPERIENCE

Target Distribution Center 2019 – 2025

Warehouse Operations – Engineering & Facilities Support

- Monitored industrial control systems and sensor data across shifts; escalated anomalies before cascading failures in a continuous operations setting.
- Performed structured root cause analysis on system failures and documented resolutions for compliance and audit readiness.
- Executed hardware and configuration changes under formal change management; coordinated cross-team response to restore service and reduce downtime.

EDUCATION & CERTIFICATIONS

WGU — MS, Cybersecurity (In Progress) Expected Oct 2026 · GPA 3.50

CSUS — BS, Computer Science Jan 2025 · GPA 3.50

CompTIA: Security+ (SY0-701) · CySA+ (CS0-003) · PenTest+ (PT0-003) · SecurityX (CAS-005) · CSIE (stackable)
