

JACOB COOK

Security Analyst | Case Triage & Detection Tuning | Cloud & Identity Threats | Sigma · MITRE ATT&CK · Wazuh · Python

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com
[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

Detection-focused security analyst experienced reviewing alerts end-to-end, recommending true/false-positive verdicts with documented evidence, and tuning detection content to reduce noise. Authored Sigma rules mapped to MITRE ATT&CK that eliminated 100% of false positives in simulated triage. Hands-on across cloud and identity surfaces (Azure AD, Okta, AWS labs) and SIEM (Wazuh) with Python/SQL for log analysis. CompTIA-certified across four disciplines, BS Computer Science, MS Cybersecurity in progress.

TECHNICAL SKILLS

Detection & Investigation: Alert Triage, Case Verdicts (TP/FP/Benign), Sigma Rule Authoring, Detection Tuning, MITRE ATT&CK, Threat Hunting, Investigation Playbooks, IOC Analysis, Phishing Triage, SOAR

Cloud & Identity: Azure AD / Entra ID, Okta, AWS (CloudTrail labs), SSO / RBAC, Microsoft Sentinel (familiar), Terraform

SIEM & Tooling: Wazuh SIEM, Log-Based Investigation, Sigma, KQL (familiar), Wireshark, VirusTotal, OSINT

Development: Python, Bash, SQL, FastAPI, React, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules for Intune MDM identity abuse mapped to MITRE ATT&CK, with enrichment logic that delivered clean true/false-positive verdicts on 100% of a 100-event simulation (80 benign suppressed, 20 malicious surfaced) using admin baseline lookups.
- Documented 3 benign false-positive scenarios per rule (18 total) covering VPN logins, scheduled maintenance, and PIM activations so analysts can issue confident verdicts without escalating known-good identity activity.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py), reproducible against synthetic data, not a live tenant.

Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a Wazuh SIEM stack from scratch and reviewed 242 simulated auth-style cases, separating true-positive threats from benign noise with 100% precision after rule tuning, mirroring Tier 2 case-review workflow.
- Reduced noisy detection volume by 100% by identifying and tuning out 79 benign-only matches (cron jobs, service accounts, scheduled deployments) without dropping a single true positive, the same fix-the-detection-library work that keeps platform signal clean.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py). All metrics reproducible.

SOAR-lite: Investigation & Response Orchestrator

2026

- Eliminated four manual triage steps (classification, IOC enrichment, notification, ticket creation) by codifying investigation playbooks into automated SIEM-triggered workflows, reducing triage time by over 60% in lab testing.
- Built end-to-end alert automation: webhook ingestion from Wazuh, automatic playbook routing by event type, IP blocking, Slack notification, and case documentation with zero analyst intervention.
- Delivered a working handoff path from initial alert to documented Tier 2-ready case verdict, the same gap modern AI-assisted investigation workflows are built to close.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py). Tests run against the real FastAPI app, not mocked endpoints.

Phishing Analysis Lab

2026

- Triageed 5 real-world phishing samples end-to-end: header inspection, SPF/DKIM/DMARC validation, URL defanging, VirusTotal enrichment, IOC extraction, and attacker infrastructure mapping, achieving 100% accurate verdicts against known IOC ground truth.
- Delivered structured triage write-ups with documented IOCs, confidence assessments, and escalation recommendations that match the case-verdict format expected for customer-facing reports.

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Secured a production AI platform for corporate stakeholders by engineering RBAC and Azure AD SSO, enforcing identity boundaries that enabled executive-level adoption.
- Shipped an enterprise-grade AI platform on deadline as part of a six-person team under direct industry sponsor oversight with zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime across automated sortation and conveyor infrastructure by triaging sensor alerts and operational dashboards across rotating shifts, the same continuous case-review discipline expected in 24/7 SOC/MDR environments.
- Resolved 200+ system anomalies over six years through structured root cause analysis, producing tracked documentation that reduced repeat incidents by an estimated 30%, the same write-clear-verdicts-from-evidence skill used in security case review.
- Reduced mean time to recovery by an estimated 20% by coordinating cross-team response during outages, including escalation, triage prioritization, and post-incident reporting that mirrors investigation playbook workflows.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
