

JACOB COOK

Information Security Compliance Analyst | NIST 800-53 · ISO 27001 · SOC 2 · PCI · Audit Evidence & Control Mapping

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com
[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

Detail-driven security professional with framework knowledge across NIST 800-53, ISO 27001, SOC 2, and PCI DSS earned through CompTIA Security+, CySA+, PenTest+, and SecurityX certifications and an MS Cybersecurity in progress. Hands-on labs translate technical control language into auditable documentation: detection-rule baselines, false-positive scenarios, runbooks, and evidence repositories. Strong analytical and writing skills, structured documentation discipline, and ability to translate regulatory requirements into clear control implementations and POA&M tracking.

TECHNICAL SKILLS

Compliance & GRC: NIST 800-53, ISO 27001, SOC 2, PCI DSS, FedRAMP/GovRAMP (familiar), System Security Plans (SSPs), POA&M Tracking, Control Mapping, Audit Evidence & Repositories, Risk & Gap Analysis

Security Operations: SIEM (Wazuh), Sigma Rule Authoring, MITRE ATT&CK, Detection Tuning, Continuous Monitoring, Runbook & Workflow Documentation

Cloud & Identity: Azure AD / Entra ID, Okta, AWS labs, SSO / RBAC, Terraform

Development: Python, Bash, SQL, FastAPI, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules mapped to MITRE ATT&CK with documented control rationale, false-positive scenarios, and KV baseline lookups — the same control-implementation documentation discipline SSPs require.
- Documented 3 benign false-positive scenarios per rule (18 total) covering VPN logins, scheduled maintenance, and PIM activations as repeatable audit-style evidence for control behavior.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py), reproducible against synthetic data — the kind of repeatable evidence repositories audits depend on.

Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a full Wazuh SIEM stack from scratch and validated 12 detection rule patterns against 242 simulated events, producing documented control behavior with 100% precision after tuning.
- Reduced false-positive alert volume by 100% by tuning out 79 benign-only matches with documented justification — supporting the kind of continuous-monitoring control evidence ISO 27001 and SOC 2 audits require.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py).

SOAR-lite: Incident Response Orchestrator

2026

- Eliminated four manual triage steps by codifying response runbooks into automated playbooks, reducing triage time by over 60% — the same procedural-documentation discipline audit-ready compliance programs require.
- Built end-to-end alert automation with documented routing, escalation, and incident write-up at every stage to support repeatable, auditable response.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py).

Phishing Analysis Lab

2026

- Triageed 5 real-world phishing samples end-to-end with structured triage reports, documented IOCs, and escalation decisions in the same evidence-trail format compliance assessments require.
- Achieved 100% accurate threat classification against known IOC ground truth with documented rationale per case.

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Engineered RBAC and Azure AD SSO controls with documented data-privacy boundaries that enabled executive-level adoption.
- Shipped enterprise-grade platform on deadline under direct industry sponsor oversight with zero critical security findings — control implementations passed sponsor review the first time.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime by tracking continuous-monitoring telemetry across automated infrastructure — the same continuous-monitoring rigor compliance programs depend on.
- Resolved 200+ anomalies through structured root cause analysis with compliance-tracked documentation that reduced repeat incidents by an estimated 30% and supported audit readiness.
- Reduced mean time to recovery by an estimated 20% via cross-team coordination, escalation, and post-incident reporting that mirrors POA&M and corrective-action tracking.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
