

JACOB COOK

Associate Security Engineer | Vulnerability Management | AppSec Tooling · Dashboards · Python · AI-Augmented Analysis

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com
linkedin.com/in/jcook-dev · github.com/jacobdcook · jacobdcook.com

Engineering-focused security professional with hands-on experience administering security tooling, tuning rules to reduce false positives, and producing dashboards and KPIs that surface risk to engineering teams. Strong scripting fundamentals (Python, Bash, SQL), framework knowledge (CompTIA Security+, CySA+, PenTest+, SecurityX), and an MS Cybersecurity in progress. Comfortable adopting AI-augmented analysis to scale assessments and reporting. BS Computer Science with detection-as-code projects that mirror vulnerability triage and remediation tracking workflows.

TECHNICAL SKILLS

Vulnerability Management & AppSec: Security Tooling Admin, Tuning & False-Positive Reduction, Dashboards & KPIs, Risk & Asset Inventory Analysis, SLA Tracking, Remediation Coordination, AI-Augmented Analysis

Detection & SOC: Wazuh SIEM, Sigma Rule Authoring, MITRE ATT&CK, Alert Triage, IOC Analysis, Detection Tuning, SOAR / Playbook Automation

Cloud & Identity: Azure AD / Entra ID, Okta, AWS labs, SSO / RBAC, Terraform

Development: Python, Bash, SQL, FastAPI, React, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules mapped to MITRE ATT&CK with enrichment logic that eliminated 100% of false positives in a 100-event simulation — the same tooling-tuning discipline AppSec scanner administration requires.
- Documented 3 benign scenarios per rule (18 total) so engineering teams can suppress known-good activity without losing real risk signal.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py), reproducible against synthetic data.

Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a full Wazuh stack from scratch, validated 12 detection patterns against 242 simulated events, and produced metrics-style reporting on triage outcomes — the same dashboard/KPI pattern vulnerability programs use to drive remediation.
- Reduced false-positive volume by 100% by tuning out 79 benign-only matches with documented rationale — directly analogous to scanner-rule tuning.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py).

SOAR-lite: Incident Response Orchestrator

2026

- Eliminated four manual triage steps via Python/FastAPI automation, reducing triage time by over 60% in lab testing — the same scripting-driven efficiency expected of AppSec tooling work.
- Built end-to-end webhook ingestion, playbook routing, and ticket creation that mirrors vulnerability-management workflow automation against SLA tracking.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py).

Phishing Analysis Lab

2026

- Triageed 5 real-world phishing samples end-to-end with structured triage reports, documented IOCs, and escalation decisions — 100% accurate verdicts against ground truth.
- Used OSINT + VirusTotal + automation tooling for evidence-driven assessment, the same triage-and-report discipline VM workflows depend on.

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Engineered RBAC and Azure AD SSO controls — direct AppSec exposure on a production AI platform — that enabled executive-level adoption.
- Shipped enterprise-grade platform on deadline under direct industry sponsor oversight with zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime by tracking telemetry across automated infrastructure on rotating shifts — the same SLA-driven mindset vulnerability remediation tracking demands.
- Resolved 200+ anomalies through structured root cause analysis with tracked documentation that reduced repeat incidents by an estimated 30%.
- Reduced mean time to recovery by an estimated 20% via cross-team coordination — the same partnership pattern VM programs use with engineering and DevOps.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
