

JACOB COOK

Data & Dashboard Builder | SQL · Python · Power BI (learning) · Kibana · Reporting & Visualization | CS Grad · MS in Progress

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com
linkedin.com/in/jcook-dev · github.com/jacobdcook · jacobdcook.com

CS grad and continuing MS student who builds data-driven dashboards and structured reports end-to-end. Hands-on with SQL, Python, and dashboard-style visualization through Wazuh / Kibana, plus six years monitoring operational dashboards and KPIs at a Target distribution center. Comfortable turning a stakeholder question into a layout, visuals, measures, and a leader-ready walkthrough. Audit-tracked documentation discipline maps directly to risk and compliance reporting in a regulated environment. Eager to learn Power BI in a production setting and contribute reliable, repeatable reporting from day one.

TECHNICAL SKILLS

Reporting & Visualization: Dashboard Design (Kibana / OpenSearch via Wazuh), Power BI (learning), Excel (PivotTables, charts), Markdown / Confluence-style reporting, Data Storytelling, Leader-Ready Visuals
Data & Modeling: SQL Queries, Dataset Structuring, Python (pandas-style data work), Metric Definitions, Data Quality Checks, Documentation of Logic & Assumptions
Stakeholder Communication: Status & Operating-Review Reporting, Cross-Functional Coordination, Nontechnical Walkthroughs, Post-Incident Reports, Audit-Tracked Compliance Documentation
Tools & Platforms: Git, Linux (Ubuntu / CentOS), Microsoft 365, FastAPI, Webhook Integrations, REST APIs, Azure / Entra ID, AWS (labs)

TECHNICAL PROJECTS

Wazuh SIEM Dashboarding & Reporting Lab 2026

- Built a Wazuh / Kibana dashboard stack from scratch and designed report layouts that surface 12 detection patterns across 242 events with status, trend, and drilldown views — same one-stop layout discipline a Power BI operating-review dashboard requires.
- Defined and documented metrics (true positives, false positives, precision after tuning) so reviewers see consistent definitions across runs; reduced false-positive volume by 100% (79 benign matches suppressed) without dropping a single true positive.
- Verification: 19 passing pytest cases (tests/test_detection_accuracy.py) — every published number is reproducible against the dataset, the same data-quality discipline that reporting and sustainment cycles depend on.

Stryker / Intune Detection Pack: Metric-Driven Reporting 2026

- Authored 6 rules with measurable outcomes and documented baseline-lookup logic; presented reviewers a clear before/after report showing 100% false-positive elimination across a 100-event simulation (80 benign suppressed, 20 malicious caught).
- Documented 18 false-positive scenarios with definitions and assumptions so reviewers can interpret the dashboard consistently — the same metric-definition + logic-note discipline the role calls out.
- Verification: 43 passing pytest cases (tests/test_rules.py); every metric is reproducible from synthetic data committed to the repo.

G3-GPT: Industry-Sponsored Enterprise Platform (Team of 6) 2024

- Partnered directly with corporate sponsors as the primary stakeholder during delivery — direct experience presenting status, decisions, and tradeoffs to nontechnical leaders in a regulated business setting.
- Shipped on deadline with zero critical findings at delivery; secured the platform with RBAC and Azure AD SSO so executive users could adopt with confidence.

SOAR-lite: Reporting & Documentation Pipeline (Python / FastAPI) 2026

- Built a webhook-driven pipeline that ingests events, routes them by type, and writes structured incident documentation end-to-end — directly analogous to a reporting refresh that publishes consistent records on a cadence.
- Eliminated four manual steps and reduced cycle time over 60% in lab testing; verified by 10 pytest cases against the real FastAPI app.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Dashboards, Monitoring & Stakeholder Reporting 2019 - 2025

- Monitored operational dashboards and KPI views across rotating shifts to maintain 99.5% uptime on automated sortation infrastructure — daily practice reading status, trend, and drilldown views and acting on what the numbers showed.
- Resolved 200+ system anomalies through structured root-cause analysis; produced compliance-tracked documentation that reduced repeat incidents by an estimated 30% and supported audit readiness in a regulated operations environment.
- Reduced mean time to recovery by an estimated 20% through clear, timely status updates and post-incident reports for technical and nontechnical audiences — same operating-review communication style the role calls for.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
