

JACOB COOK

SOC Analyst (L2) | Advanced Threat Detection & Response | SIEM · EDR · MITRE ATT&CK · Runbook Authoring · Mentorship

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com
[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

SOC analyst experienced taking alerts from initial triage through root-cause identification and producing the kind of clear technical write-ups that drive incident response decisions. Built a Wazuh SIEM lab from scratch, authored 6 Sigma rules mapped to MITRE ATT&CK, and engineered SOAR-style playbooks for repeatable response. Strong in threat actor TTPs, runbook documentation, and clear communication for both technical and non-technical stakeholders. CompTIA-certified across four disciplines (Security+, CySA+, PenTest+, SecurityX); MS Cybersecurity in progress.

TECHNICAL SKILLS

SOC & Detection: Alert Triage, Incident Response, Threat Hunting, MITRE ATT&CK, Sigma Rule Authoring, Detection Tuning, IOC Analysis, Phishing Triage, Runbook & Workflow Documentation, Technical Writing

SIEM & EDR: Wazuh SIEM (build & admin), Microsoft Sentinel (familiar), KQL (familiar), SPL (familiar), VirusTotal, Wireshark, OSINT

Cloud & Identity: Azure AD / Entra ID, Okta, AWS labs, SSO / RBAC, Terraform

Development: Python, Bash, SQL, FastAPI, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules for Intune MDM abuse mapped to MITRE ATT&CK with enrichment logic that eliminated 100% of false positives in a 100-event triage simulation (80 benign suppressed, 20 malicious caught).
- Documented 3 benign false-positive scenarios per rule (18 total) covering VPN logins, scheduled maintenance, and PIM activations so junior analysts can triage confidently without escalating known-good activity.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py), reproducible against synthetic data.

Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a full Wazuh SIEM stack from scratch and validated 12 detection rule patterns against 242 simulated auth-style events, separating true-positive threats from benign noise with 100% precision after tuning.
- Reduced false-positive alert volume by 100% by tuning out all 79 benign-only matches (cron jobs, service accounts, scheduled deployments) without dropping a single true positive.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py).

SOAR-lite: Incident Response Orchestrator

2026

- Eliminated four manual triage steps by codifying response runbooks into automated SIEM-triggered playbooks, reducing triage time by over 60% in lab testing — the same runbook-driven workflow expected of an L2 in a 24/7 fusion center.
- Built end-to-end alert automation: webhook ingestion from Wazuh, automatic playbook routing by event type, IP blocking, Slack notification, and incident documentation with zero analyst intervention.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py).

Phishing Analysis Lab

2026

- Triageed 5 real-world phishing samples end-to-end: header inspection, SPF/DKIM/DMARC validation, URL defanging, VirusTotal enrichment, IOC extraction, and attacker infrastructure mapping — 100% accurate threat classification.
- Delivered production-style triage reports with IOCs, confidence assessments, and escalation decisions in the same format SOC reports use for stakeholder communication.

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Secured a production AI platform by engineering RBAC and Azure AD SSO, enforcing identity boundaries that enabled executive-level adoption.
- Shipped enterprise-grade platform on deadline under direct industry sponsor oversight with zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime by triaging sensor alerts and operational dashboards across rotating shifts — the same continuous-monitoring discipline expected in 24/7 fusion-center work.
- Resolved 200+ system anomalies over six years through structured root cause analysis with tracked documentation that reduced repeat incidents by an estimated 30%.
- Reduced mean time to recovery by an estimated 20% by coordinating cross-team incident response, including escalation, triage prioritization, and post-incident reporting.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
