

JACOB COOK

Data Protection Analyst | DLP Triage & Tuning | Data Classification & Governance | SIEM Query (KQL/Sigma) · Python

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com

[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

Detection-focused security analyst with hands-on experience triaging events, tuning policy and rule logic to reduce false positives, and documenting investigations clearly for technical and non-technical stakeholders. Sigma rule authoring, MITRE ATT&CK mapping, and SIEM query work in Wazuh translate directly into DLP event triage, data classification policy enforcement, and tooling tuning. Strong in Python and SQL for log/data analysis. CompTIA-certified across four disciplines (Security+, CySA+, PenTest+, SecurityX); MS Cybersecurity in progress.

TECHNICAL SKILLS

Data Protection & Detection: Event Triage, Policy Tuning, False-Positive Reduction, Data Classification (frameworks), Data Lifecycle & Retention, Sigma Rule Authoring, MITRE ATT&CK, IOC Analysis

SIEM & Query: Wazuh SIEM (build & admin), KQL (familiar), SPL (familiar), Microsoft Sentinel (familiar), Log-Based Investigation

Cloud & Identity: Azure AD / Entra ID, Okta, AWS labs, SSO / RBAC, Terraform

Development: Python, Bash, SQL, FastAPI, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules with policy logic that eliminated 100% of false positives in a 100-event simulation (80 benign suppressed, 20 malicious caught) using KV-style admin baseline lookups — the same tune-the-tool work DLP requires.
- Documented 3 benign scenarios per rule (18 total) covering admin baselines and known-good activity so analysts can issue clean verdicts without escalating policy-compliant behavior.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py), reproducible against synthetic data.

Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a full Wazuh SIEM stack from scratch and validated 12 detection patterns against 242 simulated events, separating true positives from benign noise with 100% precision after tuning.
- Reduced false-positive volume by 100% by tuning out 79 benign-only matches without dropping a single true positive — the same policy-tuning discipline expected in DLP operations.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py).

SOAR-lite: Incident Response Orchestrator

2026

- Eliminated four manual triage steps (classification, IOC enrichment, notification, ticket creation) by building automated SIEM-triggered playbooks, reducing triage time by over 60% in lab testing.
- Built end-to-end alert automation: webhook ingestion from Wazuh, automatic playbook routing by event type, IP blocking, Slack notification, and incident documentation with zero analyst intervention.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py).

Phishing Analysis Lab

2026

- Triageed 5 real-world phishing samples end-to-end: header inspection, SPF/DKIM/DMARC validation, URL defanging, VirusTotal enrichment, IOC extraction — 100% accurate verdicts against ground truth.
- Delivered structured triage reports with documented IOCs, confidence assessments, and escalation decisions matching the operational support format used in data protection investigations.

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Secured a production AI platform by engineering RBAC and Azure AD SSO, enforcing data privacy and access boundaries that enabled executive-level adoption.
- Shipped enterprise-grade platform on deadline under direct industry sponsor oversight with zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime by triaging telemetry alerts on rotating shifts — the same continuous monitoring and operational support discipline DLP analysts apply to event triage.
- Resolved 200+ system anomalies through structured root cause analysis with tracked documentation that reduced repeat incidents by an estimated 30%.
- Reduced mean time to recovery by an estimated 20% by coordinating cross-team response and producing post-incident reporting for non-technical stakeholders.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
