

# JACOB COOK

Security Identity Protection Specialist | Identity Threat Hunting · Azure AD/Okta · MFA & Conditional Access · CrowdStrike Identity (Familiar) · Splunk/SIEM · Python & PowerShell

Sacramento, CA · 916 709 1794 · [jacobcookofficial@gmail.com](mailto:jacobcookofficial@gmail.com)  
[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · [github.com/jacobdcook](https://github.com/jacobdcook) · [jacobdcook.com](https://jacobdcook.com)

*Identity-focused security analyst with hands-on Azure AD, Okta, and SIEM detection work, plus Sigma-format rule authoring and SOAR-style playbook development. Built Wazuh from scratch with FastAPI orchestration, automated alert enrichment, and pytest-backed validation. Comfortable mapping identity attack paths to MITRE ATT&CK and writing PowerShell/Python automation for triage and containment. CompTIA stack (Security+, CySA+, PenTest+, SecurityX); BS Computer Science; MS Cybersecurity in progress.*

## TECHNICAL SKILLS

**Identity Threat Detection & IR:** Identity-Focused Hunting (Kerberoasting/NTLM, Golden/Silver Ticket, Token Abuse — concept familiarity), Account Takeover Triage, MFA Fatigue Detection, Session/Token Revocation Workflows, Conditional Access Concepts  
**Identity Platforms & SIEM/EDR:** Azure AD / Entra ID, On-Prem AD (familiar), Okta, SSO/SCIM, MFA, SIEM (Wazuh hands-on, Splunk familiar), EDR Concepts (CrowdStrike, Defender — familiar), Netskope (familiar)  
**Detection Engineering & Automation:** Sigma-Format Rules, KQL-Style Query Patterns, Regex, MITRE ATT&CK Identity Sub-Techniques, SOAR-Style Playbooks, REST/Graph API Automation, PowerShell & Python  
**Languages & Tooling:** Python, PowerShell, Bash, SQL, FastAPI, REST APIs, Git; Linux, Windows, Wireshark, VirusTotal, Reporting & Dashboards

## TECHNICAL PROJECTS

### Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules for Intune MDM abuse mapped to MITRE ATT&CK, with enrichment logic that eliminated 100% of false positives in a 100-event simulation (80 benign suppressed, 20 malicious caught) using KV store-style admin baseline lookups.
- Documented 3 benign false-positive scenarios per rule (18 total), covering VPN logins, scheduled maintenance, and PIM activations so analysts can triage confidently without escalating known-good activity.
- Verification: 43 passing pytest cases in repo (tests/test\_rules.py), reproducible against synthetic data, not a live tenant.

### Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a full Wazuh SIEM stack from scratch and validated 12 detection rule patterns against 242 simulated auth-style events, separating true-positive threats from benign noise with 100% precision after tuning.
- Reduced false-positive alert volume by 100% by tuning out all 79 benign-only matches (cron jobs, service accounts, scheduled deployments) without dropping a single true positive.
- Verification: 19 passing pytest cases in repo (tests/test\_detection\_accuracy.py). All metrics reproducible.

### SOAR-lite: Incident Response Orchestrator

2026

- Eliminated 4 manual triage steps (classification, IOC enrichment, notification, ticket creation) by building automated SIEM-triggered playbooks, reducing triage time by over 60% in lab testing.
- Built end-to-end alert automation: webhook ingestion from Wazuh, automatic playbook routing by event type, IP blocking, Slack notification, and incident documentation with zero analyst intervention required.
- Delivered a working handoff path from initial alert handling to documented, Tier 2-ready response that closes the gap between raw detection and actionable cases.
- Verification: 10 passing pytest cases in repo (tests/test\_orchestrator.py). Tests run against the real FastAPI app, not mocked endpoints.

### Phishing Analysis Lab

2026

- Triaged 5 real-world phishing samples end-to-end: header inspection, SPF/DKIM/DMARC validation, URL defanging, VirusTotal enrichment, IOC extraction, and attacker infrastructure mapping, achieving 100% accurate threat classification against known IOC ground truth.
- Delivered production-style triage reports with documented IOCs, confidence assessments, and escalation decisions that mirror real security operations output.

### G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Secured a production AI platform for corporate stakeholders by engineering RBAC and Azure AD SSO, enforcing data privacy requirements that enabled executive-level adoption.
- Shipped an enterprise-grade platform on deadline as part of a six-person team under direct industry sponsor oversight with zero critical security findings at delivery.

## PROFESSIONAL EXPERIENCE

### Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime across automated sortation and conveyor infrastructure by monitoring sensors, alerts, and operational dashboards across rotating shifts, the same continuous monitoring discipline that defines round-the-clock SOC work.
- Resolved 200+ system anomalies over six years through structured root cause analysis, producing compliance-tracked documentation that reduced repeat incidents by an estimated 30% and supported audit readiness.
- Reduced mean time to recovery by an estimated 20% by coordinating cross-team incident response during outages, including escalation, triage prioritization, and post-incident reporting that mirrors security incident response workflows.

## EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
