

JACOB COOK

DLP Engineer | Detection-as-Code · SOAR Automation · Regex & Custom Matchers · Python · ServiceNow Workflows · AI-Augmented Triage

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com
linkedin.com/in/jcook-dev · github.com/jacobdcook · jacobdcook.com

Detection-focused security engineer with hands-on Sigma rule authoring, regex-driven custom matchers, and Python/FastAPI SOAR-style automation that reduces manual review time. Eliminated 100% of false positives in simulated triage by building enrichment logic and baseline-lookup matchers — the same fidelity-driven discipline DLP engineering depends on. Strong builder mindset: prefers to solve problems with code over out-of-the-box vendor configs. CompTIA-certified across four disciplines (Security+, CySA+, PenTest+, SecurityX); BS Computer Science; MS Cybersecurity in progress.

TECHNICAL SKILLS

DLP & Detection Engineering: Sigma Rule Authoring, Regex / Pattern Matching, Custom Dictionary & Baseline Lookups, Detection Tuning (TP↑/Friction↓), Coverage Gap & Bypass Testing, MITRE ATT&CK, IOC Analysis
SOAR & Automation: Python (FastAPI, REST APIs), PowerShell (familiar), Webhook-Driven Playbooks, Case-Mgmt Workflow Automation, Detection-as-Code (Git, version-controlled, pytest-validated), AI-Augmented Triage Concepts
Stack & Tools: Wazuh SIEM (build & admin), Microsoft Sentinel / Defender (familiar), KQL/SPL (familiar), ServiceNow Concepts, Microsoft Purview / Zscaler / Proofpoint (familiar)
System & Cloud: Network Routing & Proxy Concepts, Mail Transport Concepts, Azure / Entra ID, AWS labs, Linux (build & admin), Terraform, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack: Detection-as-Code 2026

- Authored 6 Sigma-format detection rules with regex matchers, baseline-lookup logic, and custom enrichment that maximized true positives while eliminating 100% of false positives in a 100-event simulation — direct DLP-style detection-tune-validate cycle.
- Documented 18 benign scenarios per rule (false-positive coverage) so analysts can review with reduced manual triage burden.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py).

SOAR-lite: Automated Review & Response Pipeline (Python / FastAPI) 2026

- Engineered an end-to-end automated review pipeline: webhook ingestion, REST-API enrichment, automated case routing/blocking, notification, and incident write-up — directly analogous to DLP-SOAR-ServiceNow integration patterns.
- Reduced manual triage time by over 60% in lab testing by automating low-fidelity event handling.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py). Tests run against real FastAPI app, not mocks.

Blue Team SOC Monitoring Lab: Wazuh SIEM 2026

- Built a Wazuh SIEM stack from scratch and validated 12 detection patterns against 242 simulated events with 100% precision after tuning — the same continuous-tuning discipline DLP detection requires.
- Reduced false-positive volume by 100% by tuning out 79 benign-only matches with documented justification.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py).

Phishing Analysis Lab 2026

- Triageed 5 phishing samples end-to-end with header inspection, mail transport rule analysis, IOC extraction, and attacker infrastructure mapping — 100% accurate verdicts. Direct exposure to the kind of mail-flow and proxy concepts DLP enforcement requires.

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6) 2024

- Engineered RBAC and Azure AD SSO controls with documented data-privacy boundaries — direct exposure to data-handling, classification, and access-enforcement design.
- Shipped enterprise-grade platform on deadline with zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response 2019 - 2025

- Maintained 99.5% uptime by triaging telemetry alerts on rotating shifts — the same continuous case-review discipline DLP analysts depend on.
- Resolved 200+ anomalies through structured root cause analysis with tracked documentation that reduced repeat incidents by an estimated 30%.
- Reduced mean time to recovery by an estimated 20% via cross-team coordination, escalation, and post-incident reporting.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress) Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
