

JACOB COOK

DevSecOps Engineer | CI/CD Security · IaC · Cloud Hardening | Python · Bash · Docker · NIST 800-53 · FedRAMP

Sacramento, CA · 916 709 1794 · jacobcookofficial@gmail.com

[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

Security-focused engineer with hands-on Python/Bash automation, Linux fundamentals, and cloud lab work in Azure and AWS. Builds CI/CD-style automated workflows with FastAPI, webhook integrations, and Git-based deploy pipelines. Strong on infrastructure-as-code concepts (Terraform), containerization basics (Docker), and federal framework knowledge (NIST 800-53, FedRAMP) earned through CompTIA Security+, CySA+, PenTest+, and SecurityX certifications. US citizen. BS Computer Science; MS Cybersecurity in progress.

TECHNICAL SKILLS

DevSecOps & Pipelines: CI/CD Concepts, Git/GitHub Actions, FastAPI Build Pipelines, IaC (Terraform), Docker, Security Scanning & Dependency Checks (concepts), Compliance Gates (NIST 800-53, FedRAMP familiar)

Cloud & Systems: AWS labs, Azure / Entra ID, Linux (Ubuntu / CentOS), System Hardening, Networking, Wireshark

Detection & Monitoring: Wazuh SIEM (build & admin), Sigma Rule Authoring, MITRE ATT&CK, Log Monitoring, Incident Response, Alert Triage

Development: Python, Bash, SQL, FastAPI, React, Git

TECHNICAL PROJECTS

SOAR-lite: Incident Response Orchestrator (Python / FastAPI)

2026

- Built a CI/CD-style automated workflow in Python and FastAPI: webhook ingestion, playbook routing, IP blocking, Slack notification, and incident documentation — directly analogous to security-control automation in build/deploy pipelines.
- Eliminated four manual triage steps and reduced triage time by over 60% in lab testing.
- Verification: 10 passing pytest cases in repo (tests/test_orchestrator.py). Tests run against the real FastAPI app, not mocks.

Stryker / Intune Detection Pack: Detection-as-Code

2026

- Authored 6 Sigma-format detection rules under Detection-as-Code workflow (Git-tracked, version-controlled, pytest-validated) — the same shift-left discipline DevSecOps applies to security controls.
- Eliminated 100% of false positives in a 100-event simulation using documented baseline-lookup logic.
- Verification: 43 passing pytest cases in repo (tests/test_rules.py).

Blue Team SOC Monitoring Lab: Wazuh SIEM

2026

- Built a full Wazuh SIEM stack from scratch on Linux infrastructure — manual configuration, log ingestion, alert rules — direct hands-on with Linux operations and security tooling deployment.
- Reduced false-positive alert volume by 100% by tuning out 79 benign-only matches without dropping a single true positive.
- Verification: 19 passing pytest cases in repo (tests/test_detection_accuracy.py).

G3-GPT: Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Engineered RBAC and Azure AD SSO on a production AI platform — direct cloud identity and security integration work in a Git-based development workflow.
- Shipped enterprise-grade platform on deadline under direct industry sponsor oversight with zero critical security findings at delivery.

Phishing Analysis Lab

2026

- Triageed 5 real-world phishing samples end-to-end with documented IOCs and attacker infrastructure mapping — 100% accurate verdicts against ground truth.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer: Systems Monitoring & Incident Response

2019 - 2025

- Maintained 99.5% system uptime by monitoring environments, logs, and alerts across automated infrastructure on rotating shifts.
- Resolved 200+ anomalies through structured root cause analysis with tracked documentation that reduced repeat incidents by an estimated 30% and supported audit readiness.
- Reduced mean time to recovery by an estimated 20% through cross-team coordination, escalation, and post-incident reporting.

EDUCATION & CERTIFICATIONS

WGU | MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS | BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
