

JACOB COOK

Detection Engineer | SOC Analyst | Wazuh · Azure AD · Okta · Python · SOAR

Sacramento, CA · (916) 314-5358 · jacobcookofficial@gmail.com
[linkedin.com/in/jcook-dev](https://www.linkedin.com/in/jcook-dev) · github.com/jacobdcook · jacobdcook.com

Detection-focused security professional with hands-on experience building SIEM environments, engineering detection rules, and automating incident response workflows. CompTIA-certified across four disciplines (Security+, CySA+, PenTest+, SecurityX) with a BS in Computer Science and an MS in Cybersecurity in progress. Six years of operational systems experience — monitoring, root cause analysis, and incident coordination — that translates directly into SOC intuition. Building in Wazuh, Okta, Azure, and Python daily.

TECHNICAL SKILLS

Detection & SOC: Threat Detection, SIEM (Wazuh), Alert Triage, Incident Documentation, Phishing Analysis, IOC Analysis, Playbook Automation, SOAR

Cloud & Identity: Azure AD, Okta, SSO / RBAC, Terraform, Microsoft Sentinel (familiar)

Systems: Windows Endpoints, Linux (Ubuntu / CentOS), Wireshark, Networking, System Hardening, VirtualBox

Development: Python, Bash, SQL, FastAPI, React, Git

TECHNICAL PROJECTS

Stryker / Intune Detection Pack — Detection-as-Code

2026

- Authored Sigma-style rules and playbooks for Intune MDM abuse scenarios inspired by public reporting, mapped to MITRE ATT&CK.
- Documented enrichment and triage paths so alerts carry analyst-ready context beyond raw telemetry.
- Verification: pytest in repo (tests/test_rules.py) validates six rules, benign vs malicious cases, and a mixed synthetic batch against admin baseline CSV (reproducible, not a live tenant).

Blue Team SOC Monitoring Lab — Wazuh SIEM

2026

- Built a production-equivalent SOC monitoring environment from scratch — full Wazuh stack across multiple endpoints — to develop and validate detection logic against Python-simulated attacks.
- Produced structured incident timelines from auth and security logs that separated true-positive patterns from benign noise across simulated events.
- Verification: pytest harness on 242 simulated auth-style events; twelve rule patterns exercised; tuning exclusions removed 79 benign-only alert matches in this simulation (tests/test_detection_accuracy.py).

SOAR-lite — Incident Response Orchestrator

2026

- Cut manual work on recurring alert types by building automated SIEM-triggered playbooks for enrichment, notification, and routing.
- Integrated alert enrichment pipelines to remove repetitive manual steps on common categories and speed time-to-response in the lab.
- Verification: pytest covers webhook ingestion, playbook routing, and four scripted manual steps removed in the lab flow (tests/test_orchestrator.py).

Phishing Analysis Lab

2026

- Triageed phishing samples end-to-end — header inspection, link handling, VirusTotal enrichment — with structured IOC extraction.
- Delivered analyst-ready triage reports with IOCs, confidence notes, and escalation recommendations aligned to incident response workflows.

G3-GPT — Industry-Sponsored Enterprise AI Platform (Team of 6)

2024

- Secured a production AI platform for corporate stakeholders by engineering RBAC and Azure AD SSO — enforcing data privacy requirements that enabled executive-level adoption.
- Shipped an enterprise-grade platform on deadline as part of a six-person team under direct industry sponsor oversight — zero critical security findings at delivery.

PROFESSIONAL EXPERIENCE

Target Distribution Center | Operations Engineer — Systems Monitoring & Incident Response

2019 – 2025

- Sustained reliable operations across industrial control systems by monitoring sensors and alerts across shifts — the same continuous monitoring discipline as security operations centers.
- Resolved recurring system anomalies through structured root cause analysis, producing compliance-tracked documentation that reduced repeat incidents and supported audit readiness.
- Drove faster recovery by coordinating cross-team incident response — escalation, triage prioritization, and post-incident reporting in an operations context.

EDUCATION & CERTIFICATIONS

WGU — MS, Cybersecurity (In Progress)

Expected Oct 2026 · GPA 3.50

CSUS — BS, Computer Science

Jan 2025 · GPA 3.50

CompTIA: Security+ · CySA+ · PenTest+ · SecurityX · CSIE (stackable)
